                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, cc migration or differentiation) is typically governed by information cc received from other cells and the immediate environment. The information cc is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, cell receptors or membrane bound proteins. These membrane bound proteins cell receptors may be of use as pharmaceutical and diagnostic agents, such cc as in the blocking of receptor-ligand interactions. The current invention cc provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the cDNA sequences encoding them. The novel conceptors of the invention may have cytostatic activities through the conceptors of the manufacture of a medicament for diagnosing or treating a cuseful for the manufacture of a medicament for diagnosing or treating or detecting the expression of a tumour associated gene. The present convention is the amino acid sequence of a human PRO protein of the invention convention the expression of a tumour associated gene.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polypeptide sequence is a full length human protein of the invention.

cc any one of 40 nucleotide sequences (I). The nucleic acid molecule (I) comprising cc any one of 40 nucleotide sequences (I). The nucleic acid molecules and cc polypeptides are useful for diagnosing and treating a subject having a cd isorder, or a subject at risk of developing a disorder, which is cc associated with aberrant 21910, 56634, 5503, 2504, 15977, 14760, 25501, cc 17903, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21667, h1983, cc ansociated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501, cc disorders, colon disorders, brain disorders, platelet disorders, breast cc disorders, colon disorders, kidney (Irenal) disorders, breast cc disorders, thymus disorders, thyroid disorders, testes disorders, covarian disorders, prosetate disorders, testes disorders, cardiovascular disorders, spleen cc disorders, thymus disorders, thyroid disorders, testes disorders, cardiovascular disorders, pain cc disorders, metabolic disorders, neurological or central nervous system cdisorders, erythroid disorders, neurological or central nervous system cdisorders, experimentally, e.g. cancer, heart failure, hypertension, cc angina, osteocarthritis, reumatoid arthritis, multiple sclerosis, Crohn's disease, psoriasis, or asthma. The nucleic acid molecules and colorypeptides are also useful as modulating agents in regulating a variety of cellular process, e.g. cell proliferation, differentiation, growth and cc invention. Note: The sequence of a novel human protein of the invention in electronic format from

The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, uvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, Guillain-Barre syndrome and chronic inflammatory demyelinating of the polyneuropathy. This sequence represents a human PRO polypeptide of the

The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bloactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents a human CAP of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 associated

                                                                                                                                                                                                                                                                                                                                   This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (PTK's), as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antiinflammatory activities. This polypeptide sequence is a human kinase protein sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     kinase; human; tyrosine protein kinase; serine/threonine protein kinase

Patent No. 6492156
GENERAL INFORMATION:
APPLICANT: YAN, Chumhua et al.
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS,
TITLE OF INVENTION: THEREOF
FILE REFERENCE: CLO01306
CURRENT APPLICATION NUMBER: US/09/984,890
CURRENT FILING DATE: 2001-10-31
NUMBER OF SEQ ID NOS: 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SOFTWARE: FastSEQ for Windows Version

Sequence 1257, Application US/09270767
PATENT NO. 6703491
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PATENTIN Ver. 2.0
SEQ ID NO 1257
LENGTH: 484

```

The present sequence is the coding sequence for Murine Lymph node Stromal cell kinase 1 (MLSK-1). The protein encoded by the present sequence is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease,

Novel murine and human kinase nucleic acids useful for treating inflammations, infections, tumors, allergies, autoimmune diseases, and

responses.

Claim 1; Page 86-87; 106pp; English.

for stimulating or suppressing immune

The invention relates to cancer-associated proteins (CAP) and the cancer-associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer drug candidate and monitoring the effect of the anticancer drug candidate on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue. This sequence represents murine CA cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

increased levels of cholesterol

2; 94pp; English.

The invention relates to an AMPK (AMP-activated protein kinase)-related CC kinase, designated SNARK polypeptides and polynucleotides. SNARK CC (SNIF/AMP-activated protein kinase) is involved in stress response to CC glucose deprivation. The polynucleotides are useful for expressing SNARK CC protein in isolated form or as a protein conjugate. Activation of SNARK CC protein in isolated form or as a protein conjugate. Activation of SNARK CC in other cell types such as heart and skeletal muscles, as well as CC increases GIUT-4 and glycogen in muscle. Activation of SNARK is predicted CC to have insulin-like effects that would enhance the disposal of glucose into muscle and reduce plasma glucose for the treatment of diabetes and CC some type of disorders of lipoprotein production leading to increased CC levels of cholesterol or triglycerides. SNARK or its variants may be administered to a subject to treat or prevent a disease associated with decreased expression of SNARK, such as diabetes. SNARK antibodies are CC used to modulate SNARK activity either in vivo for therapeutic purposes, CC SNARK antagonists may be administered to increase fuel production, CC decrease glucose uptake and increase levels of blood glucose in a patient XX suffering from hypoglycaemia. The present sequence is rat SNARK cDNA

                                                                                                                           The invention describes an isolated 21910, 56634, 55053, 2504, 15977, CC 21967, h1983, m1993, 38555 or 593 nucleic acid molecule (I) comprising CC any one of 40 nucleotide sequences (I). The nucleic acid molecules and disorder, or a subject at risk of developing a disorder, which is CC associated with aberrant 21910, 56634, 55053, 2504, 15977, 14760, 25501, CC m1983, 3700, 21529, 26176, 26343, 56638, 18610, 33217, 21967, h1983, CC differentiative disorders, brain disorders, platelet disorders, brain disorders, lung disorders, brain disorders, cervical disorders, blung disorders, covarian disorders, thymus disorders, thyroid disorders, testes disorders, commune, e.g. inflammatory disorders, associated with bone metabolism, CC immune, e.g. inflammatory disorders, cardiovascular disorders, cellular proliferation disorders, completely disorders, cardiovascular disorders, completely disorders, blood vessel disorders, engine, e.g. call claims, liver disorders, viral disorders or anglogenic disorders, erythroid disorders, neurological or central nervous system considers, erythroid disorders, neurological or central nervous system disorders, erythroid disorders, heart failure, hypertension, considerables, paoriasis, or asthma. The nucleic acid molecules and considers are also useful as model disorder in multiple sclerosis, Crohn's considers, paoriasis, or asthma. The nucleic acid molecules and considers had division. This sequences given in the specification are also avaialable in electronic format from
